## LACK OF UNITY

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

**Group I**, claims 1-16, drawn to a positive guide means between a compression plate and tool elements in a crimping device for forming projections.

**Group II**, claims 17 and 20 (newly added), drawn to a brake lining carrier plate.

**Group III**, claims 18 and 19 (newly added), drawn to a process for manufacturing two carrier plates together.

There are no common special technical features. In accordance with Rule 13.1, the application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Since there is no common technical feature addressed in the claims as per below, lack of unity is found to exist.

**Group I:** elimination of projection breakage when tool is removed and to provide a guiding means within the device (see lines 19-23 on page 2 and the paragraph bridging pages 2 and 3 of the specification).

**Group II:** secure attachment of the brake lining to the carrier plate.

**Group III:** increased production (see fourth paragraph on page 5 of the specification).

There is no unity of invention according to PCT Rule 13.1 and 13.2 either with regard to the special technical features or with regard to the solved problems between the groups of claims.
